

1. Critical Irrigation Stages

Rice: Maintain 2-5 cm standing water during transplanting, tillering, panicle initiation, and flowering. Moisture threshold: > 80%.

Wheat: Critical irrigation at Crown Root Initiation (CRI stage, 20-25 DAS), tillering, jointing, flowering, and grain filling. Moisture threshold: > 50%.

Maize: Critical stages at knee-high, tasseling, and silking. Moisture threshold: > 55%.

Cotton: Critical stages at squaring and boll development. Moisture threshold: > 45%.
